

## ReACT Tool Kit

Pictures of Climate Change Impacts in Palm Beach King Tides are the highest of the high tides that occur twice a year. In Florida they occur in fall and in spring. King Tide pictures taken in various municipalities in Florida coastal communities appear below, and can be used on tabling posters. Try to find local photographs so people are familiar with the inundated areas.

Note that these are photographs showing tidal flooding. There is no storm precipitation causing the flooding shown.
